**Reviewed by:** Mimi Omar

The author has condensed her almost 30 years of working experience to present dermatology in a unique and interesting manner in this book. Unlike a textbook, the reader is guided on common as well as commonly misdiagnosed skin conditions including adverse drug reactions and occupational dermatoses by a series of quizzes which are different from the usual multiple choice type of questions. Responses are scored according to their implications on the respondent; for example, the answer will denote that the respondent is either a safe doctor, wasteful of resources or may cause harm to the patient.

It will be advantageous for the reader to know basic dermatology but the author has considered readers who may be unfamiliar with the terms by first testing the reader on his knowledge of common dermatological terminologies. The correct answers are given. Useful tips are also provided to differentiate and recognise the skin lesions.

With more than 300 coloured images of a wide range of skin conditions collected from local patients, the reader will be able to actively challenge himself in privacy and at his own pace.

This book is simple and fun as a learning tool and will be very useful for housemen, postgraduate medical trainees and primary healthcare providers who want to assess their skills in dermatology.
